

SMARTLOCK DIGITAL

WORLD'S LEADING SAFE, VAULT & ATM LOCKS

SMARTLOCK DIGITAL ASSISTANT (SDA)

This is the user interface. The assistant can be deployed as an App or a URL and can be accessed on a personal device, PC or Laptop.

- + It allows a user to enter their ID & password.
- + Select the safe locks they are approved to open.
- + View their personal one-time opening code (OTC).
- + Geo-location is checked and confirmed before using an opening code.

SMARTLOCK DIGITAL GATEWAY (SDG)

This is the administration interface for the Smartlock Digital Assistant System. It allows the administrator in real time to:

- + Add and delete users
- + Manage all locks
- + Create access profiles for a user, groups of users, a lock or groups of locks
- + Set Geo-locations for locks and users
- + Audit and Reporting

SMARTLOCK DIGITAL INTEGRATION SERVICE (SDIS)

This is the software that links the components of the Smartlock Digital Assistant. The SDIS has been specifically designed to allow for integration with other business and security software.

INTEGRATION

The Smartlock Digital Assistant can be integrated via the SDIS with security and business software. Integration examples include:

Security Systems

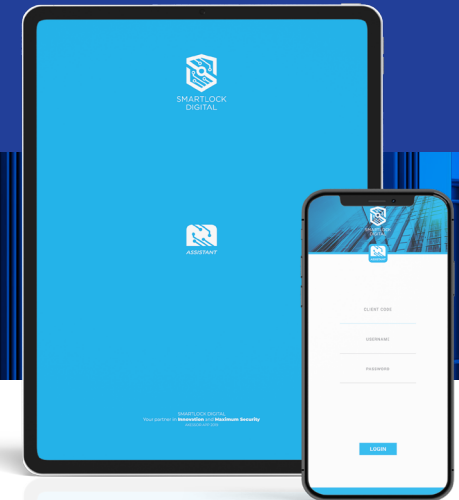

HR Systems

LDAP/ Active Directory

Compliance and Safety Systems

Single Point Sign On

Other Business Software

AS 274

QUESTOR ONE TIME CODE SOFTWARE

This is the Questor software that initialises and then synchronises the safe locks to allow the generation of one-time opening codes.
